## REMARKS

Claim 1 has been amended to define the expires attribute, indicating a trigger expiration time that prevents accessing said trigger after the expiration time. This precludes the interpretation asserted by the Examiner in the previous office actions.
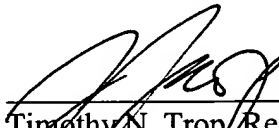

In other words, the expires attribute must really be an expires attributes, as now set forth in the claims. Therefore, it is impossible to read the claim on things which are not truly expires attributes.

The claim requires that there be an expires attribute that prevents accessing the trigger after the expiration time, but, nonetheless, the resources enabled to be accessed after the trigger expiration time.

In view of these remarks, the application should now be in condition for allowance.

Respectfully submitted,

Date: July 27, 2005
